## SYLLABUS OF B.SC. FOOD TECHNOLOGY

### Semester I

<table>
<thead>
<tr>
<th></th>
<th>ME-301</th>
<th>Engineering Drawing</th>
<th>2 (0-0-2)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td></td>
<td>Introduction to the engineering drawing, machine drawing, conventional lines and breaks. Drawing section symbols of various materials. Projection, principal planes, orthographic projection, a brief introduction to oblique, perspective and isometric views.</td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td><strong>Practicals</strong></td>
<td></td>
</tr>
<tr>
<td></td>
<td></td>
<td>1. Drawing elevation, side and plane of simple objects/machine parts to scale in both 1st angle projection and 3rd angle projection systems.</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>2. Drawing sectional views of various machine parts such as pulleys, bearings keys and couplings, pipe joint, etc. From given pictorial/isometric views.</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td></td>
<td>3. Fastening, temporary and permanent. Helix, screw threads- various forms.</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td></td>
<td>4. Multiple start screw threads rivets and riveted joints.</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td></td>
<td>5. Drawing an isometric view.</td>
<td>2</td>
</tr>
<tr>
<td></td>
<td></td>
<td>6. Exercise on development of surfaces</td>
<td>2</td>

<tr>
<td>5</td>
<td>Microbiology: history and scope; contributions of Leeuwenhoek, Pasteur and Koch. Principle of microbiology: Light Microscopy (Bright field, dark field, phase contrast, fluorescence); preparation and staining of specimens; electron microscopy. Microbial taxonomy: principles; numerical taxonomy; major characteristics used in taxonomy; classification according to Bergey’s manual of systematic bacteriology. Structure and functions of prokaryotic cells; difference between prokaryotes and eukaryotes. Microbial growth and nutrition: the growth curve; factors affecting growth of microorganisms, estimation of bacterial growth; bacteriostatic and bactericidal agents; the common nutrient requirements and nutritional types of microorganisms. Bacterial genetics; DNA as the genetic material; structure of DNA; bacterial mutations (spontaneous and induced); genetic recombination-(transformation, transduction, conjugation). Micro flora of air, soil and water: methods for controlling microorganisms in air; water as carrier of pathogens.</td>
<td></td>
<td></td>
</tr>
<tr>
<td></td>
<td>Practical: General instruction for microbiological laboratory. Microscope- simple and compound; Microbiological equipments; autoclave, hot air oven, incubator, centrifuge, colorimeter, laminar airflow, membrane filter. Simple staining- methylene blue; crystal violate; negative staining. Differential staining (Gram, spore, acid fast). Mortality of microorganisms; hanging drop technique. Measurement of microorganisms by micrometry. Preparation of commonly used growth media liquid and solid: simple and differential media. Isolation technique for microorganisms- Streak &amp; pour plate Enumeration of microorganisms in air and soil. Enumeration of microorganisms in water: total viable count, coliform (MPN).</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th></th>
<th>ECON-331</th>

- **Algebra:** Theory of quadratic equations. Binomial index (for positive integral index only), Exponential and logarithm series, partial fractions, theory of matrices, sum, difference and multiplication of matrices, transpose, elementary idea of adjoint, inverse of matrices, solution of linear equations, permutation and combination.

- **Trigonometry:** Complex numbers, De Moivre’s theorem and its simple application.

- **Coordinate geometry:** Equation of standard curves and their identification. Differentiation tangents and normals, maxima & minima.

- **Integral calculus:** definite integrals, standard methods of integrations, Applications of integral calculus to are enclosed by curve, length of arc, volume and surface of revolution.

- **Vector analysis:** Scalars and vectors, sum and difference of vectors, dot and cross products.
Nature Scope and development of food chemistry: Moisture in foods; Role and type of water in foods, Functional properties of water, water activity and sorption isotherm, Molecular mobility and foods stability. Dispersed systems of foods; Physicochemical aspects of food dispersion system, a) Sol b) gel c) foam d) emulsions. Rheology of diphase systems.

Carbohydrates; Functional characteristics of different carbohydrates, Changes of carbohydrates on cooking, Modification of carbohydrates, Dietary fibres and carbohydrates digestibility. Proteins in foods; Functional characteristics of proteins and amino acids, Pure proteins of plant and animal origin with their functional characteristics, Processing induced, physical, chemical and nutritional changes in protein, Chemical and enzymatic modification of protein. Lipids in foods: Role and use of lipids /fat, Physicochemical aspects of fatty acids in natural foods, crystallization and consistency, Chemical aspects of lipids antioxidation, thermal decomposition, Chemistry of frying Technology of fat and oil processing; a) Refining, b) Hydrogenations c) Inter etherification d) Safety use of oils and fats in food formulation. Enzymes in food industry; Carbohydrases, Proteasase, Lipases.

Sources of food, scope and benefit of industrial food preservation, perishable, non perishable food, causes of food spoilage. Preservation by salt & sugar – Principle, Method, Equipment and effect on food quality. Thermal processing methods of preservation – Principle and equipments: Canning, blanching, pasteurization, sterilization, evaporation. Use of low temperature – Principal, equipment and effect on quality. Chilling, cold storage, freezing. Preservation by drying dehydration and concentration – Principle, Methods, Equipment and effect on quality :Difference, importance of drying & dehydration over other methods of drying and dehydration, equipments and machineries, physical and chemical changes in food during drying and dehydration .Need and Principle of concentration, methods of concentration – Thermal concentration, Freeze concentration, membrane concentration, changes in food quality by concentration. Preservation by radiation, chemicals & preservatives. Definition, Methods of Irradiation, Direct & Indirect effect, measurement of radiation dose, dose distribution, effect on microorganisms. Deterioration of Irradiated foods-physical, chemical and biological; effects on quality of foods. Presentation of foods by chemicals, antioxidants, mould inhibitors, antibodies, acidulates etc. Preservation by fermentation- Definition, Advantages, disadvantages, types, equipments.

Recent methods in preservation : Pulsed electric field processing, High pressure processing, Processing using ultrasound, dielectric, ohmic and infrared heating. Theory, equipments and effect on food quality.

Practical: Demonstration of various machineries used in processing. Demonstration of effect of blanching on quality of foods. Preservation of food by heat treatment- canning. Canning of fruits and vegetables. Preservation of food by high concentration of sugar i.e. preparation of jam. Preservation of food by using salt- Pickle. Preservation of food by using acidulants i.e. pickling by

|     | **Computer Applications in Dairy Industry**  
Programming Concepts and computer languages. 
Applications in Dairy industry: Use of RDBMS, Milk procurement and, Financial accounting system, 'Personnel management system etc. 
Use of spread sheet: Cost analysis of milk and milk products, Estimation of labour efficiency, Monitoring quality standards of dairy products, Budgeting and forecasting, Estimation of losses in manufacturing and packaging, etc. 
Use of linear Programming package, formulation of least cost mix for ice-cream, cattle feed, baby-food, etc. 
Introduction to process control, control systems, process control principles, process description, process control block diagrams, control system evaluation, analog and digital processing, units, standards and definitions, process control diagrams, time response, significance and statistics. Computers in process control, Programmable controllers, data logging, supervisory control, computer based controllers, characteristics of digital data, sampled data system,
Development of controller software, Input -data operations, controller modes, Computer controller, examples.

**Practicals**
1. Writing simple programmes with basic, Cobol, FORTRAN, C+ 
2. File maintenance programmes
3. MIS report generation programmes
4. Development of MIS case studies
5. Spreadsheet package of case studies
6. Use of LP Packages
8. Use of SPSS Packages
9. Visit to a Dairy Plant: Demonstration of Process description & control system in Dairy Plant

**Practical**: Study of tools used in installation of a refrigeration plant including charging and detection of leaks. To study different parts and learn operation of bulk milk cooler. Study of different parts and learn the operation of a refrigeration plant/ice plant using ammonia refrigerant. Study of different parts and learn the operation of a vapour absorption refrigeration plant. Dismantling and assemble an open compressor and a sealed unit. Study different parts and refrigeration controls of the following (a) Refrigerator (b) Water cooler (c) Deep Freezer (d) Compare their cooling coils and other systems. To find out the rating (cooling rate) at different suction temperatures (temperature differences) and air handling capacity of the air cooling unit. Plotting the practical refrigeration cycle on a pressure enthalpy diagram and to compare it with a theoretical refrigeration cycle. Study different parts and operation of a (a) Air washer, (b) Room cooler, (a) Air conditioner, (d) Chemical dehumidifiers, (e) Cooling. Plotting of psychrometric process: Sensible heating & cooling. Dehumidification & cooling and heating & humidification. Study of different humidity indicating, recording and controlling devices. Problems on cold storage. Visit to cold storage.

Food quality and its role in food industry; Definition of Food quality, Role of food quality in Food Industry. Quality attributes; Classification of quality attributes, Color and gloss: Definition, Different colors, color measurement by spectrophotometer, muncell color system, lovibond tintometer, role in food qualities. Role of viscosity and consistency in food quality. Size and shape: Production, role in Food industry Measurements: weight, volume, weight volume ratio, length, width, diameter, symmetry, curvature, area. Defects: Classification, Genetic physiological defects Structural, off color, character, Entomological Defects: holes, Scars, lesions, off coloring, curled ayes, pathological defects. Mechanical defects, Extraneous or foreign material defects. Measurement of defects: Improving visibility by dilution, white background, color differences, standardization of conditions, reference standards, counts and measures, isolation of defects by floatation, elution, electronic sorting, internal defects. Flavour: Definition and its role in food quality, Taste, classification, taste qualities, relative intensity, reaction time, effect of disease, temperature, and taste medium on taste, basic tastes, interaction of tastes. Odour : definition, Classification, neutral mechanisms, Olfactory abnormalities, odor testing, techniques, thresholds, odor intensities, olfaction. Visual, Auditory, Tackle and other senses, Vision, audition, oral perception other than taste. Factors influencing sensory measurements: Attitudinal factors, motivation psychological errors in Judgment, relation between stimulus and perception adaptation. Correlation of sensory and instrumental analysis. Quality Measurements: Laboratory measurement: types of tests, panel selection and testing environment, serving procedures, instruction to judges, Difference tests, directional difference tests, classification of difference tests, two sample tests, three sample tests, multisampling tests, comparison of procedures, ranking, scoring, hedonic scaling, dilution procedures, descriptive sensory analysis, contour method, other procedures, Consumer measurement: Factors influencing acceptance and preference, objectives of consumer preference studies, information obtained from consumer study, factors influencing results from consumer surveys, Methods of approach, development of the questionnaire, types of questionnaires, serving procedures. Comparison of laboratory panels with consumer panels. Limitations of consumer survey. Quality of raw materials: Physical, Chemical and microbial quality. Quality of products during processing & after processing color, taste, texture, flavour, appearance. Factors influencing the Food qualities: Soil, field practices, harvesting practices, procedures, packaging, transportation, storage, conditions, processing conditions, packaging and storage conditions of finished products. Recording and reporting of quality.

| Concept of sampling  
| Simple random sampling with replacement  
| Simple random sampling without replacement  
| Introduction to testing of hypotheses and Tests of Significance  
| 'Z' and 'T' test for one sample problems  
| 'Z' and 'T' test for two sample problems  
| 'Chi-square' test for independence of attributes and goodness of fit. Simple correlation coefficient and its test of significance  
| Lines regression, Rank correlation  
| **Practicals**  
| 1. Formation of frequency distribution and graphical representation.  
| 4. Applications of 'Z' test for one and two sample problems  
| 5. Applications of 'T' test for one and two sample problems.  
| 6. Applications of Chi-square test.  
| 8. Rank correlation coefficient.

SYLLABUS OF I.D.D.(DT)

FIRST SEMESTER

IDD-301 DAIRY TECHNOLOGY - I
INDIAN DAIRY INDUSTRY & MARKET MILK

1. Market Milk: Market Milk Industry in India and Abroad
2. Clean Milk production, collection of Milk and practices followed at rural milk collection centres, chilling of milk, milk preservation by hydrogen peroxide and LP systems
3. Transportation of milk. Reception of milk. Platform tests
4. Filtration, clarification and separation of milk, Standardization of milk
5. Pasteurization of milk
6. Homogenization of milk
7. Sterilization of milk by conventional method UHT processing of milk sterilization
8. Special milks, recombined milk, toned milk, double toned milk, filled milk, vitaminised milk, flavoured milk
9. Packaging and distribution of milk
10. Metals in dairy equipments manufacture
11. Cleaning and sanitation of dairy equipment
12. Defects in milk, their causes and prevention

Practical
1. Reception of milk and platform tests
2. Fat. SNF and acidity tests of milk
3. Filtration and clarification of milk
4. Preparation of standardized, recombined, toned double toned milks
5. Preparation of flavoured and sterilized milk
6. Can washing and sanitation of dairy equipments.
7. Separation of milk
9. Pasteurization of milk
10. Filling/ Packing of milk by FFS Machines, common problems
Chemistry of Milk & Milk Constituents

i. Composition of Milk:

ii. Physical properties of milk:

Freezing point and boiling point: effect of dissolved substance on freezing point and boiling point; Use of cryoscope in detecting adulteration of milk with water.

Surface tension: Explanation, factors affecting

Viscosity: Factors affecting, importance.

Electrical conductivity: factors responsible, application in detection of mastitis.

Refractive, Index: Explanation, importance.

pH and titratable acidity pH of milk, its importance; milk acidity- natural and developed; constituents responsible: extent of contribution.

Buffer value: Explanation, Buffering agents in milk.

Oxidation:- Reduction potential: Explanation, factors affecting, significance.

iii. Neutralisers and preventives in milk;

iv. Milk constituents and their chemical properties:
i) Milk lipids; Definition and composition of fat glycerides, fatty acids, saponifiable and unsaponifiable matter, sterols, fat soluble vitamin, phospholipids; Properties of milk fat- density, refractive index, iodine value, RM value, polenske value, saponification value, melting point. Relation of milk fat constants to fatty acid composition; importance in quality control.
ii) Milk proteins:

(iii) Major milk enzymes:
   Level in milk and their role in milk processing.
   Functions, influence of processing parameters.

(iv) Water soluble vitamins in milk:
   Levels in milk, effects of light and heat

(v) Carbohydrates:
   Definition, classification, presence in milk.
   Lactose – structures, physical forms. Solubility, reducing property, hydrolysis, status of lactose in milk, estimation of lactose in milk.

(vi) Minerals in milk:
   Major and trace elements: salt balance (Physical equilibrium-colloidal, soluble and ionic) and its importance: Factors affecting physical equilibrium among the salts-temperature, pH and concentration.

Practical

1. Preparation and standardization of sodium hydroxide, hydrochloric acid, sulphuric acid, silver nitrate, potassium permanganate and sodium thiosulphate.
2. Sampling of milk for chemical analysis Platform tests of milk.
3. Determination of titratable acidity of milk
4. Preparation of Gerber acid and determination of fat in milk by Gerber and Milk tester methods.
5. Determination of fat by Mojonnier method
6. Determination of lactose in milk by Lane Eynon and polarimetric method.
7. Determination of milk proteins by Kjeldahl and Pyne’s methods.
9. Phosphates test
10. Detection of preservatives, neutralizers and adulterants in milk.
11. Detection of adulteration of milk with water by freezing point method.
BASIC MICROBIOLOGY

A. General Microbiology
1. Introduction to Microbiology; Definition, History of Microbiology, Microbiology, Microscope & its uses.
2. Nutrition & Metabolism of Bacteria
3. Bacterial growth
4. Effect of environment of growth of bacteria
5. Destruction of bacteria by physical & chemical modes.
6. Salient features of Moulds
7. Salient features of Actinomycetes, Rickettise and virus.

B. Salient features of Applied Microbiology
1. Soil Microbiology
2. Air Microbiology
3. Water Microbiology
4. Silage Microbiology
5. Industrial Microbiology

Practical

1. Familiarity with common equipment used in microbiological work; use of ovens, steam sterilizers, pressure sterilizers, refrigerators, care of microscope.

2. Common Bacteriological Techniques;
   Cleaning & sterilization of glassware, preparation of median, pH adjustment, preparation of dilution blanks, preparation of stains and indicators and their use in microbiology.
   Simple staining and differential staining; motility of microorganisms.

3. Evaluation of Bacterial population on agar plate and direct cell enumeration.

4. Study of important characteristics of microbes; Staphylococci, Streptococci, Micrococci, Enterococci, Aerobic and Anaerobic bacteria, Lactic acid bacteria, coliforms, streptococci, micrococci, clostididia, yeasts and moulds.

5. Microbiological examination of Soil, Air, Water and Silage.

LNG-300 ENGLISH & BASIC TECHNICAL WRITING 3 CREDIT

1. Language:
   a. Word Enrichment- Antonyms, Synonyms, One word k substitution
   b. Sentence – Types, Structure & Parts
   c. Inflection – Noun
   d. Tenses
   e. Parts of speech
f. Voice

2. Reading
   Comprehension:
   a. Listening
   b. Reading

3. Writing:
   Composition
   a. Precis Writing
   b. Essay Writing
   c. Letter Writing (Components, Formats & different types)
   d. CV
   e. Resume

IDD-304 DAIRY PRODUCTION –I 4 CREDITS
(Fodder Production & Cattle Nutrition)

A  Fodder Production:
  1. Systems of forage farming and dairy production in India.
  2. Classification of soils, factors affecting fertility of soil acidity, salinity and methods of reclamation.
  3. Tillage, tools and implements used for tillage.
  4. Manures and fertilizers, methods of application
  5. Methods of sowing and implements used for sowing.
  7. Study of plant disease and pests, plant protection methods, use of weedicides and pesticides in fodder crops.
  8. Sources of irrigation, methods of irrigation, water requirement of fodder crops, drainage of water.
 10. Classification of fodder crops, selection of fodder crop.
 11. Cultivation of grasses- Hybrid Napier, Guinea grass, para grass etc.
 12. Cultivation of cereal fodders- maize, oats barley, teosinte etc.
 13. Cultivation of Millet fodders- jowar, ragi, bajra etc.
 14. Cultivation of legumes- berseem, Lucerne, cowpea, dolichos etc.
 15. Study of fodder trees and shrubs- subabul, susbenia, gliricidia etc.
 16. Important crop rotations in different regions of the country, importance of crop rotations mixed cropping.
 17. Conservation of fodder- silage and hay making
 19. Seed production for fodder crops available sources

Practicals
  1. Use of common tools and implements for tillage.
2. Seed bed preparation- ploughing, harrowing, leveling making bunds and channels.
3. Identification of forage crops, parts of plants, quality of crops.
4. Preparing root slips and transplanting grasses.
5. Identification of seeds, sowing maize and Lucerne, application of manures and fertilizers.
7. Application of weedicides and pesticides.

B Animal Nutrition:
1. Digestive system: Digestive enzymes, their classifications and properties.
2. Importance of salivary secretion in ruminants (Amount, composition and action of saliva).
3. Digestion in the ruminant stomach, movements of the rumen.
4. Rumination and its nervous control (regurgitation, mastication, reinsalivation) Absorption through the rumen wall.
5. Functions of abdominal secretion Digestion in the small intestine.
6. Regulation and control of intestinal secretions. Role of pancreas. Absorption at various levels of the gut.
7. Feeding of Dairy animals; Feeding stuffs – their classifications for growth and milk production of dairy animals.
8. Importance of major and trace elements and their requirements for growth and milk production of dairy animals.
10. Digestion, absorption and utilization of feed nutrients in ruminants.
11. Digestibility coefficients, Total digestible nutrients, Nutritive ratio, starch equivalent.
12. Various measures of feed energy-gross, metabolisable and net energy.
13. Feeding standards in different countries.
15. Feeding standards, Computation and preparation of balanced rations under various conditions.
16. Machines used for feed processing:: formulation of concentrate feed stuffs for various categories of cattle.
17. BIS standards –least cost ration formulation for dairy animals. Concentrate preparation as mash and pellets.
18. Complete feed formulation and feeding system.

Practical
1. Identification of common feeds and fodders Examination of common concentrate feeds for quality control.
2. Chemical composition of feeds for moisture, crude and true protein, either extract, fibre, total and soluble ash, calcium and phosphorous.
4. Metabolism trial. Least cost ration formulations for various categories of cattle.
Applied Maths

1. **Differential calculus**
   Differential co-efficient, simple applications, meaning of the sign of differential co-efficient, application to small errors and the theory of equations. Higher order derivatives, Leibnitz theorem, Geometrical applications, Tangent and normal’s, angle between curves, sub- tangent and sub-normal, Asymptotes, Curvature radius of curvature, centre of curvature, Concavity and convexity, points of inflexion, maxima and minima of functions of single variable, elements of curve tracing, Partial differentiation. Roll’s theorem, mean value theorem, Taylors theorem, Taylors and Maclurins series, evaluation of indeterminate forms, L’ Hospital’s rule.

2. **Integral calculus.**
   Definite integral as a limit of a sum, rectification of simple plans curves, areas of plane curves, areas of plane curves, surfaces and volumes of revolution, theorem of pappar. Centre of gravity, centre of pressure, moment of inertia, Approximate integration, transpezidal, Simposons rule.

3. **Vector calculus**
   Scalar and vector fields, Directional derivative, gradient of a scalar field, divergence and curl of vector field. Line integral, evaluation of line integrals, Multiple integrals and their evaluation. Surface and volume integrals, Divergence theorem and Stokes theorem.

Basic Statistics

Compilation of Data: Introduction, Scores: Discrete and Continuous, Frequency distributions, graphical Representation of the data (Polygon, histogram & pie- diagram)

Measures of Central Value Arithmetical Mean, Median, Mode

Measures of Dispersion of scores – range, Q, mean deviation, standard deviation, co-efficient of variation.

Normal curve- characteristics, Non- normal curves- skewness and kurtosis.

Causes of non- normality

Significance of the difference between two means by t-test, x2 – test (chi-square test)

Significance of the differences among more than two means by F-test

Sampling methods: types, requisites for randomization, use of random numbers.
### SECOND SEMESTER

<tr>
<td>IDD-308</td>
<td>Dairy Production II</td>
<td>3</td>
</tr>
<tr>
<td></td>
<td>(Cattle Breeding &amp; Gen. Mgt.)</td>
<td></td>
</tr>
</tbody>
</table>

**General Introduction:** Importance of inheritance and environment in development of cattle, concept and significance of Dairy Farm management.

**Cattle Breeding:** Systems of breeding and their relative advantages and disadvantages. In breeding coefficient, Heat and its detection in cows.

**Artificial Insemination:** Merits, demerits, limitations, A.I. for higher rate of contraception. Current breeding policies and salient features.

**Dairy Farm Management:** Indian and exotic breeds of cattle, systems of raising calves, care of milking herd, marking of animals, Dehorning and disbudding, Castrating male calves, clean milk production.

**Practicals**
1. Identification of different equipments used in animal reproduction and dairy farm management.
2. Problems on inbreeding co-efficient.
3. Familiarity with various breeding records maintained at dairy farm.
4. Care of newly born calf.
5. Marking and dehorning disbudding of animals

<td>DAIRY ENGINEERING- I</td>
<td>4</td>
</tr>
<tr>
<td></td>
<td>(DRAWING &amp; WORKSHOP PRACTICES)</td>
<td></td>
</tr>
</tbody>
</table>

1. Engineering Drawing: Principles, first and third angle projections, Principal planes, orthographic projection
2. Isometric Views
3. Drawing elevation, side and plan of simple objects/machine parts.
4. Elements of Workshop Technologies’ workshop practice, safety care
5. Welding, brazing and soldering, gas and electric welding
6. Working of lathe, milling machine, shaper & planer
7. Grinding machines and drilling machines
8. Hydraulics: Pressure, pressure head units: Measurements of pressure
9. Meaning of laminar and turbulent flow: Statement of continuity equation
10. Bernoulli’s theorem and its application
11. Flow measurement with orifice, venture meter and rotameter.
12. Water supply for the Dairy: Sources, water Quality
13. Selection of pumping equipment: Classification of pumps: principles of working, operation and maintenance of centrifugal and reciprocating pumps, sanitary pumps
15. Heat transfer through slab and composite wall: Overall heat transfer coefficients
17. Temperature measurement devices

PRACTICALS

1. Operation of lathe machine
2. Operation of drilling and grinding machine
3. Soldering and welding practice
4. Performance of a centrifugal pump
5. Study of sanitary milk pumps
6. Measurement of thermal conductivity
7. Pressure, temperature and flow measurement in liquid lines.
9. Study of different types of heat exchangers.

IDD-310 Dairy Chemistry- II (Chemistry of Milk Products) 4 Credit

1. Physicochemical changes in milk and milk constituents during heating, concentration and drying: effect on nutritional value.
2. Cream: Creaming, strokes law; factors affecting creaming, rheological characteristics of cream, composition and properties of dry cream, standards.

7. Infant milk foods: Milk for infant feeding Special features.

8. Malted milk foods: Composition, physico chemical aspects in the preparation of malted milk foods, standards packaging

11. Indigenous milk products: khoa, chhana, paneer, chakka, srikhand, peda, burfi, rasagolla, basundi etc. composition, quality attributes and defects, packaging, standards.

12. Frozen products: Composition of icecream and kulfi, emulsifiers and stabilizers, role of different constituents and processing parameters (Homogenization, whipping, over run) in Physical attributes of ice cream and kulfi. Defects in ice cream and kulfi, Packaging, standards.

13. Caseinates and co-precipitates: Different types of casein preparations, their uses and standards, preparations of co-precipitates. Functional properties of caseinates and co-precipitates.

15. Lactose: manufacture and use in food and pharmaceutical preparations.

**Practicals**

(a) Cream: Sampling and analysis of cream for fat acidity.

(b) Butter: Determination of moisture, fat, salt, curd, and acidity.

(c) Ghee: Determination of fat constants: melting point, refractive index. RM and potenke values, saponification value. Iodine value, determination of acidity and peroxide value.

(d) Concentrated milk: Sampling determination of total solids, fat, proteins, sucrose and lactose.

(e) Milk powder: sampling, determination of moisture, total solids, fat, proteins, total ash, carbohydrates, lactose, solubility percent. Insolubility index bulk density.

(f) Infant foods and malted milk foods, moisture, total ash and insoluble ash, solubility, starch.

(g) Cheese: Sampling, determination of moisture, fat, protein, salt and acidity.

(h) Dahi: sampling, Determination of total solids, fat and acidity.

(i) Yoghurt: determination of sugar.
(j) Indigenous products: Sampling and analysis of Khoa, channa, chakka, and paneer, for moisture/ total solids, fat and proteins.

(k) Ice- cream; sampling, Determination of overrun, acidity, fat total solids, protein and sucrose.

(l) Caseinate and co-precipitates, Analysis for moisture, fat, ash, colour.

IDD-311 DAIRY MICROBIOLOGY- II (MICROBIOLOGY OF MILK) 4 Credits

A Microbiology of Milk
1. Sources of microbial contamination of milk and their importance
2. Milk – borne disease
3. Important groups of spoilage of micro organisms and their manifestation in milk.
4. Microbial growth in milk during storage and transport
5. Taints and abnormal conditions in milk
6. Principles of sanitation practices at all stages of production and processing
7. Bacteriology of heat-treated milks
8. Evaluation of bacteriological features of milks

B Microbiology of Foods
1. Classification of foods
2. Natural functional systems of food and their interactions on shelf life
3. Food processing compulsions and options
4. Types of food spoilage and their aetiology
5. Methods of limiting microbial proliferation in foods
6. Features of food fermentations as a desirable change
7. Evaluation of microbiological features of foods

Practical

A Microbiology of milk
1. Sampling of milk for microbiological analysis
2. Application of rapid tests for evaluation of milk quality
3. Enumeration of bacterial numbers by direct and indirect methods
4. Methods used for determining psychrotropic organisms in milk
5. Assessment of pasteurized milk based on the following; standard plate count. E coil test. Phosphate test, thermoduric and thermophilic numbers
6. Evaluation of utensils and equipments for sanitation

B Microbiology of foods
1. Comparative study of raw and processed foods
2. Study of food enzymes in relation to their profiles at shelf life
3. Effect of storage temperature on shelf life foods
4. Microbiology of vegetables, eggs, meat, flour, bread, cereals and spices
5. Role of salt, sugar, inorganic acids and alkalies in food preservation
IDD-312  
DAIRY TECHNOLOGY- II  
(FAT RICH DAIRY PRODUCTS)  
4 Credit

Status of fat rich dairy products in India and abroad. 
Introduction to milk lipids - definition and general composition of milk fat. 

Cream: efficiency of cream separation and factors affecting it; control of fat concentration in cream. Receiving, grading, sampling and weighing of raw cream; neutralization, pasteurization and cooling of cream. Preparation and properties of different types of cream; table cream, sterilized cream, whipped cream, plastic cream, frozen cream and cultured cream. Preparation of cream for butter making. 

Butter: introduction to the butter-making process; theory of churning; batch and continuous methods. Technology of butter manufacture; over-run in butter; control off at losses in “utter milk; packaging and storage; transportation; defects in butter; rheology of butter; uses of butter. 
Butter-making equipment: construction, operation, care and maintenance of cream separators, coolers and vacreator, factory butterchurn and continuous butter making machines. 
Special butters and related products: manufacture, packaging, storage and properties of whey butter, flavoured butter, whipped butter, renovated butter/fractionated and poly-unsaturated milk, fat products, vegetable oil-blended products and low-fat spreads. 
Manufacture, packaging, storage, and characteristics of Margarine of different types. 

Ghee and butteroil: Methods of ghee making. batch and industrial processes, innovations in ghee production, procedure, packaging and preservation of ghee; utilization of substandard milk and old/stored butter in the manufacture of ghee. 
Continuous process for the production of ghee. 
Methods of manufacture, packaging, storage, distribution and uses of butter-oil. 
Nutritional aspects of cream, butter, butter-milk, ghee and ghee residue. 
Health aspects of milk fat. 

Practicals 
1. Standardization, neutralization, pasteurization and cooling of cream 
2. Preparation of sterilized cream. 
3. Preparation of cooking butter by the hand-operated chum. 
4. Preparation of desi butter. 
5. Manufacture of table butter using the power-driven chum. 
6. Preparation of a low-fat spread. 
7. Preparation of ghee from cream and butter. 
8. Plant visit.

IDD-313  
DAIRY TECHNOLOGY- III  
(INDIGENOUS MILK PRODUCTS & MILK BASED SWEETS)  
3 Credit

INDIGENOUS MILK PRODUCTS 
1. Ghee: 
   (a) Definition of ghee, importance of ghee in India 
   (b) Methods of manufacturing ghee 
   (c) Grading of Ghee and factors influencing quality of ghee 
   (d) Difference of ghee & butter oil 
   (e) Utilization of ghee and residue.
   (a) Preparation & Packaging, yield and composition.  
   (b) Factor affecting quality  
   (c) Packaging & Preservation  
   (d) Marketing and grading  
   (e) Legal standards  

MILK BASED SWEETS  
1. Place of milk based sweets in India and abroad.  
2. Method of manufacture, packaging, storage and transportation of Rasogulla, Gulab jamun, Kalakhand, Rabri, Keer, Khurcha, malai, Rasmalai, Barfi, Peda, Srikhand, Sandesh, Chakka, Milk cake, Pantoa, Payodhi and lassi.  

Practicals  
1. Preparation of khoa  
2. Preparation of Ghee from butter and cream.  
3. Preparation of Paneer.  
4. Preparation of chhana  
5. Preparation of Dahi  
6. Preparation of Surti Cheese  
7. Preparation of milk based sweets
THIRD SEMESTER

IDD-319 DAIRY PRODUCTION -III (CATTLE HEALTH & REPRODUCTION) 3 Credits

1. General Management: Importance of ruminants, classification of breeds of the basis of utility.
2. Important dairy breeds of indigenous and exotic cattle and buffaloes.
3. Calf rearing different methods
4. Management of dairy heifers and bull calves
5. Care of pregnant animals during and after parturition.
7. Cleaning and sanitation of cattle yard premises.
10. Preparation of animals for cattle shows, transport of animals by roads and rail.
11. The principles and practices of breeding dairy stock.
12. Medelism, Different systems of breeding
13. In breeding, line breeding, cross breeding, grading up, pregnancy testing, culling and selection of animals in the open market.
15. Embryo transfer technology- a general concept and its role in national perspective.
16. Signs of health and ill health.
17. Diagnosis and detection of diseases care and feeding of sick animals
18. Disinfections, isolation and prophylaxis measures during outbreak of contagious diseases of cattle like foot and mouth, Rinder Pest, Brucellosis, T.B. Jhones and mastitis.

Practicals
1. Layout of a cattleyard, living space for each category of animal from health point of view.
2. Recognition of body parts of dairy animals
3. Physical character of the breeds maintained.
5. Estimation of age and body weight
6. Preparation of animals for milking, milk cooling, observations of signs of oestrus and pregnancy.
7. Cleaning and sanitation of milking sheds and milk record room.
8. Judging of milch cows
9. Preparation of animals for show
10. Study of important cattle records
11. Identification of common cattle feeds computation of rations
12. Recording observations on temperature, pulse and respiration.
13. Identification and use of common first aid drugs and pharmaceutical instruments used in the cattle yard.
14. Dressing of wounds and bandaging
15. Diagnosis and treatment of mastitis.
16. Practice in Artificial Insemination
17. Demonstration on Embryo Transfer Technology at the appropriate centre

IDD – 320 DAIRY ENGINEERING – II 4 Credits
(REFRIGERATION & STEAM ENGINEERING)

1. Steam and steam generators; Wet, dry and super heated steam; dryness fraction, internal energy and enthalpy; Use of steam tables.
2. Classification of boilers; constructional features and operations of vertical fire tube, horizontal return flue and automatic boilers.
3. Boiler mountings, accessories and their uses
4. Capacity and horsepower of boilers; scaling of boiler and water treatment plant.
5. Electrical Engineering: Simple and three phase power supply; star and delta connections.
6. Types and working principles of transformers
7. Principles of working, operation, selection and maintenance of single and three phase induction motors and starters.
8. Instruments for measurements of voltage current. Power and energy
9. Refrigeration Engineering: Unit of refrigeration; important components and controls of Mechanical vapour compression refrigeration system and their functions.
10. Common refrigerants
11. Application of sealed units
12. Ice bank systems
13. Features of cold stores, insulating materials, vapour barriers etc.

Practical
1. Study of constructional features of vertical fire tube boiler
2. Study of constructional features of horizontal return flue type boiler
3. Boiler fittings
4. Boiler safety devices
5. Measurement of electrical power in A.C. circuits
6. Fluorescent tube connections
7. Starting of three phase induction motor with DOL starter
8. Star delta starters
9. Study of different types of motors
10. Study of performance of different types of compressors
11. Study of refrigeration evaporators and condensers
12. Study of different types of expansion devices
13. To determine C.O.P. of a refrigeration system

**IDD - 321 DAIRY MICROBIOLOGY – III (MICROBIOLOGY OF MILK PRODUCTS)**

1. Starter cultures; Functions, classifications, maintenance, evaluation of cultures, hectarophages and recent concepts of starter technology.

Definition and composition of butter, comparative microbiology of Desi and Creamery butter, Microbial metabolism in butter, Rippened and cultured butter, and their manifestation.

Influence of technologies on microbial load and functioning. Production, handling, storage and microbial defects in butter, Rippened and cultured butter, their advantages and limitations.

5. Microbiology of ice – cream and other frozen dairy products; Definition and composition of ice-cream. Microbial load in ice cream. Growth of microorganisms in ice cream mix. Types of organisms found in ice cream.

Effect of addition of ingredients on quality of ice cream. Sources of contamination during production, handling and packaging. Brief description of Kulfi and other frozen milk products.

6. Microbiology of dry milks; Types of dried milks, Brief description of drying methods. Effect of process technology on microbial content. Influence of packing and storage on microbiological features, public health safety and evaluation.

Microbiology of reconstituted dry milks, dry milk as food adjunct and its impact on foods.
7. Microbiology of frozen desserts; Types of frozen desserts- Microbiological integrity of ingredients used. Public health hazards. Processing features and their impact on microflora. Effect of storage, transport, retailing and parlour dispensing on microbiology, plant and handling sanitation and evaluation.

8. Microbiology of indigenous milk products; Paneer/ Chahana; Physio-chemical features and their influence on microbial metabolism. Sanitation practices to check flora. Effect of storage spoilage and evaluation.

Chakka/ Shrikhand; Microbial features in relation to basal material, production hygiene and storage. Spoilage and evaluation.

Practical
1. Preparation and evaluation of starter cultures Microbiological examination of
2. Cream, butter
3. Ice cream
4. Cheese
5. Evaporated milk, sweetened condensed milk. Plain condensed milk & dried milks
6. Dahi, Yoghurt, Acidophilus
7. Khoa and Channa

IDD – 322 DAIRY TECHNOLOGY – IV 4 Credits
(CHEESE FERMENTED MILK FOODS & BY PRODUCTS)

1. Fermented Products:- History and development
2. Production of Dahi, Yoghurt, Acidophilus milk, Lassi
3. Packaging of fermented products
4. Nutritive value and legal standards
5. History of cheese making
6. Legal standards
7. Classification and composition of common varieties of Cheese
8. Technology of manufactures of Cheddar, Gauda, Mozarella, Cottage cheeses
9. Processed cheese, Cheese spread, Cheese foods and cheese
10. Stabilizers and emulsifiers used in processed cheese
11. Physical, Chemical and Bacteriological changes during ripening process, packaging and defects.
12. Judging and grading of cheese
13. By products- classification and characterization
14. Use of whey, preparation of whey protein
15. Manufacture of lactose and its use
16. Manufacture of casein and its use
Practical
1. Production of Dahi, Yoghurt, Acidophilus milk, lassi
2. Production of cheddar Cheese
3. Production of Gouda Cheese
4. Production of Mozarella cheese
5. Production of processed cheese and cheese spread
6. Production of cottage cheese
7. Packaging and analysis of cheese
8. Judging and grading of cheese
9. Manufacture of Byproduct (Preparation of lactose lactical rennet casein, calcium caseinate, why protein concentrate, whey powder and whey drink)
10. Preparation of lactic acid and rennet casein
11. Preparation of calcium caseinates
12. Preparation of whey protein concentrates
13. Preparation of whey powder
14. Preparation of lactose
15. Preparation of whey milk.

IDD – 323 DAIRY TECHNOLOGY – V 4 Credit
(CONDENSED & DRIED MILKS)

1. Status of condensed and dried milk industry in India and abroad
2. Composition and legal standards of condensed and dried milk products
3. Technology of manufacture of Sweetened condensed milk and evaporated milk
4. Defects, causes and remedies
5. Packaging and keeping quality of condensed and evaporated milks
6. Principle of drum drying, spray drying, foam drying
7. Manufacture of skim, whole, malted milk powders
8. Defects in dried milks and their causes
9. Packaging and storage
10. Instantized milk powder, infant food formulation and method of manufacture

Practical
1. Vacuum pan operation
2. Operation of roller and spray drier
3. Production of sweetened condensed and evaporated milks
4. Production of roller and dried milk powders
5. Production of spray dried skim milk powder
6. Production of malted milk
7. Judging and grading of condensed and dried milk products
5. Concept of Market, Meaning, Definition, Degree of competition in market, Demand and supply.
6. Concept of Distribution: Meaning, Definition, problem of distribution, Method of Distribution, Rent, Wages, etc.
11. Ledger: Concept, Necessities, Types of ruling, Deference between Journal and Ledger
13. Trial Balance: Meaning, Definition, Its objectives, advantages, and Limitation, Characteristics

Practical

1. Preparation of Journal
2. Preparation of Ledgers
3. Preparation of Cash Book
4. Preparation of Trial Balance
5. Preparation of Format of milk reception
6. Preparation of stock sheet
7. Calculation of Depreciation
FOURTH SEMESTER

IDD 331                     DAIRY ENGINEERING – III                     4 Credits

1. Sanitary metal and features of sanitary designs
2. S.S. Pipes and Fittings
3. Receiving room equipments
4. Working and maintenance of mechanical can washers
5. Different types of milk chilling equipments and their application.
6. A study of constructional features of milk storage tanks.
8. Efficiency, capacity and maintenance of separators
9. Constructional features, operation and maintenance of batch and HTST: pasteurizers and controls.
10. Equipment for milk sterilization and UHT processing
11. Homogenizers: Constructional features, operation and maintenance of homogenizers and accessories.
13. C.I.P. cleaning systems.

PRACTICALS

To conduct the study of constructional features and operation of:

1. Mechanical can washer
2. Plate chiller
3. Milk storage tank
4. Cream separator
5. Study of Homogenizers
6. Batch Pasteurizer
7. H.T.S.T. pasteurizer
8. FDV controller
9. Sachet filling machine

IDD- 332                     DAIRY ENGINEERING – IV                     4 Credits

1. A study of equipments for indigenous dairy products
2. Equipments for fermented and coagulated dairy products.
3. Ice cream freezers: batch type
4. Ice cream freezer continuous type, accessories
5. Equipments for condensed milk, vacuum pan
6. Classification of continuous evaporators
7. Multiple effect evaporator and accessories Equipments for drying milk: roller drier: parallel and counter flow spray driers and their accessories
8. Plant layout and design: site selection  
9. Factors concerning design and layout; example  
10. Features of dairy floors and ventilation  
11. Dairy waste treatment and methods of disposal

**PRACTICALS**

To conduct the study of constructional features and operation of:
1. Equipments for manufacture of indigenous dairy products.  
2. Cheese equipment.  
3. Butter churn  
4. Vacuum pan  
5. Multiple effect evaporator  
6. Roller drier  
7. Spray drier

To draw layouts for:
8. Chilling centers  
9. Market milk plant  
10. A plant with market milk and milk products  
   (Composite milk plant)

**IDD– 333 DAIRY TECHNOLOGY- VI 4 Credit**  
*(ICE CREAM & FROZEN DAIRY PRODUCTS)*

1. Status of Ice Cream Industry  
2. Classification of Frozen dairy products  
3. Composition of Ice Cream, BIS and PFA standards for Ice Cream. Calculation of mixes. Ice Cream ingredients, stabilizers and emulsifiers, flavouring and colouring materials  
4. Mix processing, Ice cream freezers, packaging and handling of Ice Cream  
5. Judging and grading of Ice Cream  
6. Fruit Ice Cream, Nut Ice cream, Kulfi preparation  
7. Frozen Yoghurt, characteristics and production  
8. Defects in frozed products, prevention and remedies

**Practical**

1. Selection of ingredients for Ice cream, calculation of mix preparation  
2. Preparation of Ice Cream and kulfi  
3. Preparation of Fruit Ice Cream  
4. Preparation of Casata Ice Cream  
5. Studies on the characteristics of stabilizer and emulsifiers  
6. Effect of homogenization on the quality of Ice Cream  
7. Production of Frozen yoghurt  
8. Judging and grading of frozen dairy products  
IDD – 334  QUALITY ASSURANCE OF DAIRY PRODUCTS  3 Credit

Chemical Quality Control:
1. Responsibility and organization of quality control department general principles.
2. Food and laws and standards – PFA, BIS, Agmark, IDF
3. Calibration: Calibration of dairy glassware lactometer, butyrometer, milk pipette etc.
5. Flavour: Flavor components in diary foods, Artificial flavours.
7. Packaging: packaging material for dairy foods- types and properties.
8. Contaminate pesticide residues, heavy metals, toxins, antibiotics, detergents, sanitizers and contaminants from packaging materials.
9. Sensory evaluation: General introduction, testing conditions, taste, odour, aroma, texture appearance, and other parameters. Difference tests and ranking tests. Individual tests, Individual steps in selection of test subjects.
10. Water, analysis, treatment
11. Detergents and sanitizers: types, properties and analysis.
12. Elementary knowledge of instrumental analysis.
13. Prediction of self-life of dairy products including UHT processed Sterilized milk

Practical
1. Standardization of milk testing equipments butyrometer, lactometer, milk pipette, thermometers etc,
3. Estimation of browning in dairy foods.
4. Estimation of antioxidant, preservatives, neutralizers and monostearate.
5. Estimation of organ chlorine pesticide residue in dairy foods.
7. Estimation of temporary and permanent hardness of water.
10 Determination of iron in fortified dairy foods.
11. Separation of dairy food colours by thin layer chromatography.

Microbiological Quality Assurance:
2. Food Safety: Traditional problems. Emerging problems
3. Regulatory systems/ agencies: Government / NGO / Professional / Other agencies. Mandatory regulation like PFA, etc, Optional Advisory systems like BIS, IDF Agmark based etc. Comparative standards of milk produce and milk foods of countries pioneering in specified foods.

4. Role of supporting service systems in quality food processing: water, Air, Personnel, their health, hygiene and habits, equipments design, material used, construction, finish, maintenance and hygiene, packing material, nature, design and type: warehousing and condition of their maintenance, shipping, transport systems and their handling.

7. Total quality management system for food industry, Quality audit concepts (ISO etc ) a wholistic growth from elementary. Quality control to quality Assurance culminating in total quality system.

9. Microbiological quality of milk and milk products Historical to current state of art.

10. Organization of microbiological evaluation laboratories, setting up laboratories to support TQM system.

Practicals

a. Sampling procedures for microbiological evaluation of foods.

b. Evaluation of foods for public health safety, salmonella, shigella, staphylococci, clostridia, Listeria, bacillus cereus, Campylobacter.

c. Monitoring microbial density of air-environment of processing plant.

d. Evaluation of microbiological quality of water for the processing plant.

e. Assessment of hygiene of personnel working in the plant.

f. Evaluation of equipment decision, material used, consyruction, finish and maintenance, for hygiene.

g. Assessment of packing material for hygiene.

h. Assessment of warehouse and their maintenance of microbiological contamination.

i. Evaluation of basic cleaning systems, detergent support and sanitisers.

j. HAACP evaluation of manufacturing process.

k. Assessment of microbiological quality of milk and milk products.

l. Study of microbiological laboratories with reference to their layout and their functioning.

IDD – 335 DAIRY PLANT MANAGEMENT 3 Credit

Production management
Definition, functions and structure of production management.
Production planning and control, work study and measurement, motion and method study.
Plant operations: efficiency factors, losses, BEP, financial and managerial efficiency.
Provisions of industrial legislation in India particularly for the dairy industry.
Personnel management: manpower planning, recruitment, training, transfer and promotion policies.
Job specifications, job evaluation, job enhancement, job enrichment, MBO.

Practicals

1. Flow Process Charts of different milk products
2. Identification of steps of material losses in the plant.
3. Identification of hazardous processes and equipments, safety and precautions
4. Identification and uses of common lubricants
5. Waste utilization processes

COMP- 401 COMPUTER APPLICATION 2 Credit

1. Introduction to Computers
2. H/W and S/W Concepts and Terminology
3. Operating System
   (a) DOS
   (b) Windows
4. Introduction to commonly used application software
   (a) MS Word
   (b) MS Excel
5. Computer Languages & Introduction to ‘C’ Programming Language
   (a) Input & Out put statements
   (b) Declaration of variables
   (c) Operators
   (d) Control Statements (Branching and Looping)
6. Introduction to computer Networks
7. Introduction to Internet
8. Application of I.T.

Practical List:
   (a) Working with operating systems like MS. DOS, Windows
   (b) Study of Software packages, Like MS Word, MS Excel and MS. PowerPoint
   (c) Packages related to medical applications
   (d) How to search data, workable knowledge of Internet
   (e) Simple programs in C languages
      (i) To find the largest among three numbers
      (ii) To check whether the given number is palindrome or not.
      (iii) To find whether the given number is the prime
      (iv) To find sum and average of n integer using linear array
      (v) To generate the Fibonacci series
      (vi) To find factorial of a given number using functions.

</tbody>
</table>

### Practical

1. Reception of milk and platform tests
2. Fat. SNF and acidity tests of milk
3. Filtration and clarification of milk
4. Preparation of standardized, recombined, toned double toned
1. Composition of Milk:

2. Physical properties of milk:

Freezing point and boiling point: effect of dissolved substance on freezing point and boiling point; Use of cryoscope in detecting adulteration of milk with water.

Surface tension: Explanation, factors affecting

Viscosity: Factors affecting, importance.

Electrical conductivity: factors responsible, application in detection of mastitis.

Refractive, Index: Explanation, importance.

pH and titratable acidity pH of milk, its importance; milk acidity- natural and developed; constituents responsible: extent of contribution.

Buffer value: Explanation, Buffering agents in milk.
Oxidation:- Reduction potential: Explanation, factors affecting, significance.

3. Neutralisers and preventives in milk;

4. Milk constituents and their chemical properties:
   i. Milk lipids; Definition and composition of fat glycerides, fatty acids, saponifiable and unsaponifiable matter, sterols, fat soluble vitamin, phospholipids; Properties of milk fat- density, refractive index, iodine value, RM value, polenske value, saponification value, melting point. Relation of milk fat constants to fatty acid composition; importance in quality control.
   ii. Milk proteins:
   (iii) Major milk enzymes:
       Level in milk and their role in milk processing.
       Functions, influence of processing parameters.
   (iv) Water soluble vitamins in milk:
       Levels in milk, effects of light and heat
   (v) Carbohydrates:
       Definition, classification, presence in milk.
       Lactose – structures, physical forms. Solubility, reducing property, hydrolysis, status of lactose in milk, estimation of lactose in milk.
   (vi) Minerals in milk:
       Major and trace elements: salt balance (Physical equilibrium-colloidal, soluble and ionic) and its importance: Factors affecting physical equilibrium among the salts-temperature, pH and concentration.

Practical

1. Preparation and standardization of sodium hydroxide, hydrochloric acid, sulphuric acid, silver nitrate, potassium permanganate and sodium thiosulphate.
2. Sampling of milk for chemical analysis Platform tests of milk.
3. Determination of titratable acidity of milk
4. Preparation of Gerber acid and determination of fat in milk by Gerber and Milk tester methods.
5. Determination of fat by Mojonnier method
6. Determination of lactose in milk by Lane Eynon and polarimetric method.
7. Determination of milk proteins by Kjeldahl and Pyne’s methods.
9. Phosphates test
10. Detection of preservatives, neutralizers and adulterants in milk.
11. Detection of adulteration of milk with water by freezing point method.

**IDD-303 DAIRY MICROBIOLOGY - I 4 Credits**

**BASIC MICROBIOLOGY**

**A. General Microbiology**
1. Introduction to Microbiology; Definition, History of Microbiology, Microbiology, Microscope & its uses.
2. Nutrition & Metabolism of Bacteria
3. Bacterial growth
4. Effect of environment of growth of bacteria
5. Destruction of bacteria by physical & chemical modes.
6. Salient features of Moulds
7. Salient features of Actinomycetes, Rickettise and virus.

**B. Salient features of Applied Microbiology**
1. Soil Microbiology
2. Air Microbiology
3. Water Microbiology
4. Silage Microbiology
5. Industrial Microbiology

**Practical**

1. Familiarity with common equipment used in microbiological work; use of ovens, steam sterilizers, pressure sterilizers, refrigerators, care of microscope.

2. Common Bacteriological Techniques;
   Cleaning & sterilization of glassware, preparation of median, pH adjustment, preparation of dilution blanks, preparation of stains and indicators and their use in microbiology.
   Simple staining and differential staining; motility of microorganisms.
3. Evaluation of Bacterial population on agar plate and direct cell enumeration.

4. Study of important characteristics of microbes; Staphylococci, Streptococci, Micrococci, Enterococci, Aerobic and Anaerobic bacteria, Lactic acid bacteria, coliforms, streptococci, micrococci, closticidia, yeasts and moulds.

5. Microbiological examination of Soil, Air, Water and Silage.
1. **Language:**
   a. Word Enrichment- Antonyms, Synonyms, One wordk substitution
   b. Sentence – Types, Structure & Parts
   c. Inflection – Noun
   d. Tenses
   e. Parts of speech
   f. Voice

2. **Reading**
   Comprehension:
   a. Listening
   b. Reading

3. **Writing:**
   Composition
   a. Precis Writing
   b. Essay Writing
   c. Letter Writing (Components, Formats & different types)
   d. CV
   e. Resume

---

**IDD-306 Dairy Production-I (Forage Production)**

1. **Soils** – Definition, functions, composition, texture, structure, moisture, K, pH, acid, alkaline and saline soils and reclamation, soil organism, fertility and productivity, important soil types of India, erosion and control.
2. **Tillage**- Definition of Tillage and tilth, objective, implements-primary, secondary sowing, planting-functions. Farm mechanization- advantages, limitations and scope under Indian conditions.
3. **Irrigation**- Definition of irrigation- needs, irrigation water sources quality, devices and methods of irrigation commonly used, measurement of irrigation water factors determining frequency, water requirement of important forage crops.
4. **Drainage**- Definition needs principles of layouts systems and layouts.
5. **Dry farming**- Definition, objectives, practices, crops suited manure- fertilizers-classification of plant nutrient- major, minor micro, N.P.K.- role on plant growth, deficiency symptoms, role and deficiency symptoms of minor and trace elements, classification of manures and fertilizers: FYM, compost, liquid
manure, slurry, green manure, concentrated organic manures, composition of commonly used nitrogenous, phosphatic and potassium fertilizers, method and time of application of manures and fertilizers and residual effects.

6. **Weeds** - Definition, economic weed, common weeds and methods of eradication

7. **Forage crop classification** - Herbs, shrubs, trees, grasses, legumes and others, common crops in each group, plant habits-annual, biennials, perennials-common crops in each group, cash crops, companion crops, soiling crops, silage crops hay crops.
   **Cropping seasons** - Zaid (prekharif), Kh rif and Rabi- common crops in each group. Important objectives in forage evaluation factors determining selection of forage crops.

8. **Cultivation of important crops** - Botanical name, common name, morphology, origin, package of practices, varieties, utilization, nutritive values, cost of production-per hecare, per unit of green, per unit of D.G.P. & T.D.N. – maize, Jowar, bajra, Cowpea, Guar, Rice bean and tetrakalia, oats, Berseem Lucerne, Mustards, Japanrape, Chinese Cabbage, Hybrid Napier (Napier X Bajra) Para Guinea, Dinanath, forage beet, Tapioca, fodder, turnip, fodder trees.

9. **Cropping schemes** - Rotations- Definition, principles advantages, common rotations with fodder crops. Mixed cropping- definition, advantage, principles, common mixtures of fodder crops, cropping schemes – definition advantages, points to be considered, intensity of cropping, carrying capacity. Drawing of model schemes for supply of fodder all the year round varied conditions- high, medium, low marsyland irrigated non-irrigated and partly irrigated conditions. Comparative economics of forage crops v/s cereal and cash crops.

10. **Pastures** – Different kinds, advantages, scope in India, Characteristics of good pasture species, and name of important pasture crops, establishment & management of pasture rotational grazing, silvi –pastoral concept and practices, social forestry.

11. **Forage seeds** - Importance of good seed, standard, sources, storage, protection.

12. **Conservation of fodder** – Need, forms, advantages and limitations silage making- objective, biochemical changes, types of silos, suitability of types, method of filling and co erring, crops for silage, stages of harvesting, additives and preservatives, silage quality. Hay making-crops, stage of harvesting, methods, quality under different methods. Losses in silage and hay making-comparison, comparative advantages & disadvantages of silage and hay making under different conditions.

13. **Agro Industrial By Products** – Utilisation, feed values, need under Indian condition.

---

**Practical**

1. General Introduction to a fodder farm, study of hand tools and uses, stud of bullock drawn implements, ploughing methods and practices-bullock drawn,

**IDD-307 Dairy Production-II *(Cattle Nutrition)* 4 Credits**

2. **Digestive organs and Processes in cattle**- Introduction, significance of the term “Digestion” digestive system division and functions (i) Alimentary canal and (ii) Accessory Organs, identification of the parts with the help of diagrams and models.

3. **Digestive Processes**- Mechanical, secretary, chemical, role of enzymes, digestion, absorption and metabolism of carbohydrates, fat and proteins, factors affecting digestibility and measures to improve digestion of feeds in cattle.

4. **Feed quality and Nutritive Value**- Importance and methods, chemical analysis-proximate analysis- tractions of feed components, Digestibility trial-conventional type-estimation of Energy contents- by calculation of TDN from digestion trail, Evaluation of protein quality-DGP estimation by digestion trial, calculations of Digestive co-efficient, Digestive Nutrients, TDN & DGP, different system of expressing feed value. (Elementary ideas only).

5. **Nutritional Requirements**- Ration, maintenance and production ration, requirements of dry matter, energy requirements for maintenance and lactation, feeding standards, formulation of ration-principles and requirements according to different categories of animals.

6. **Classification of feedstuffs for cattle**- Roughages and concentrates, coarse fodder and succulent fodder, straws and their uses in feeding cattle, fortification of paddy sraw urea treatment, treatments for oxalates, mineral supplementations concentrates – energy rich grains, seeds, brans, chuni,
roots, oil cakes their feed values and extent of their uses.
Whole Milk, skimmed milk powder, tapioca roots, molasses feed values and extent of their uses, scarcity feeders under adverse conditions-tree leaves, seed kernels, water hyacinth extent of their uses.
Use and minerals and vitamins in cattle feed requirement and limitations, feed additives-their extent of uses.

7. **Computation of Rations for cattle**— Desirable characteristics of a balances ration, general considerations for computation of ration, computation of ration for cattle at different stages of growth feeding of calf of different ages, milk replacers, calf of different ages, milk replacers, calf starters, pregnant heifers, cows in milk, dry cow, bull in service, working bullock, economics of feed formulation, unit cost calculation.
Compounding of feed—selection of feed ingredients, grinding, mixing, bagging, storage and distribution—different methods and limitations of their uses under different conditions, quality control of compounded feeds and chemical processes.

**Practicals**

Identification of digestive organs of cattle and accessory digestive organs.
Identification of fodders and feeds
Feeding of colostrums and milk to calves, measurement of total milk yield of cow
Computation of ration for different categories of animals, compounding of feed—grinding, mixing, bagging stitching and storage programme.
Identification of glasswares, equipment and apparatus for proximate analysis of feed stuff.
Demonstration on proximate analysis of feeding stuff
Estimation of dry matter in fodder and feeds.
Estimation of water requirements
Quality control of compounded feeds—sampling, physical analysis, chemical analysis
Demonstration on microscopic study of the histological characteristics of digestive organs of cattle.
Demonstration on identification of carbohydrates, lipids and proteins by qualities tests.
**SECOND SEMESTER**

**IDD-314**  
**ELEMENTARY STATISTICS**  
3 Credit

Compilation of Data: Introduction, Scores: Discrete and Continuous, Frequency distributions, graphical Representation of the data (Polygon, histogram & pie- diagram)

Measures of Central Value Arithmetic Mean, Median, Mode

Measures of Dispersion of scores – range, Q, mean deviation, standard deviation, co-efficient of variation.

Normal curve- characteristics, Non- normal curves- skewness and kurtosis.

Causes of non- normality

Significance of the difference between two means by t- test, x² – test (chi- square test)

Significance of the differences among more than two means by F-test

Sampling methods: types, requisites for randomization, use of random numbers.

**IDD-315**  
**DAIRY PRODUCTION III**  
4 Credits  
**(GENETICS & CATTLE BREEDING)**

1. General Management: Importance of ruminants, classification of breeds of the basis of utility.
2. Important dairy breeds of indigenous and exetic cattle and buffaloes.
3. Calf rearing different methods
4. Management of dairy heifers and bull calves
5. Care of pregnant animals during and after parturition.
7. Cleaning and sanitation of cattle yard premises.
10. Preparation of animals for cattle shows, transport of animals by roads and rail.
11. The principles and practices of breeding dairy stock.
12. Medelism, Different systems of breeding
13. In breeding, line breeding, cross breeding, grading up, pregnancy testing, culling and selection of animals in the open market.
15. Embryo transfer technology- a general concept and its role in national
perspective.
16. Signs of health and ill health.
17. Diagnosis and detection of diseases care and feeding of sick animals
18. Disinfections, isolation and prophylactic measures during outbreak of contagious diseases of cattle like foot and mouth, Rinder Pest, Brucellosis, T.B. Jhones and mastitis.

Practical

1. Layout of a cattleyard, living space for each category of animal from health point of view.
2. Recognition of body parts of dairy animals
3. Physical character of the breeds maintained.
5. Estimation of age and body weight
6. Preparation of animals for milking, milk cooling, observations of signs of oestrus and pregnancy.
7. Cleaning and sanitation of milking sheds and milk record room.
8. Judging of milk cows
9. Preparation of animals for show
10. Study of important cattle records
11. Identification of common cattle feeds computation of rations
12. Recording observations on temperature, pulse and respiration.
13. Identification and use of common first aid drugs and pharmaceutical instruments used in the cattle yard.
14. Dressing of wounds and bandaging
15. Diagnosis and treatment of mastitis.
16. Practice in Artificial Insemination
17. Demonstration on Embryo Transfer Technology at the appropriate centre

IDD-316 DAIRY PRODUCTION IV
(GENERAL MGT. & CARE OF DAIRY HERD)

4 Credit

General Introduction: Definition of Dairying, Present condition and status of Dairying in Indian, Present condition and status of dairy farmers in India, Seasonal nature of milk production, Mixed farming.

Breeds: Indian and exotic breeds of cattle, Breeds of buffaloes in India.

General Management and Care of Dairy Herd: Rearing and management of calves, Weaning of calves, management and care of milking herd, care of breeding bulls. Different systems of housing for dairy animals, Marking of animals, Dehorning / disbudding of dairy animals, Castration of male calves, Clean milk production, principles and methods of milking.

Practicals

1. General Introduction to Institute dairy farm.
2. Recognition of body parts of cow.
3. Care of newly born calf.
4. Feeding of milk to calf by pail method.
5. Identification of different equipments used on dairy farm.
7. Practice on marking, disbudding and milking of dairy animals
8. Cleaning and disinfections of barn.

### IDD-311 DAIRY MICROBIOLOGY- II

(MICROBIOLOGY OF MILK)

#### A Microbiology of Milk
1) Sources of microbial contamination of milk and their importance
2) Milk – borne disease
3) Important groups of spoilage of micro organisms and their manifestation in milk.
4) Microbial growth in milk during storage and transport
5) Taints and abnormal conditions in milk
6) Principles of sanitation practices at all stages of production and processing
7) Bacteriology of heat-treated milks
8) Evaluation of bacteriological features of milks

#### B Microbiology of Foods
1) Classification of foods
2) Natural functional systems of food and their interactions on shelf life
3) Food processing compulsions and options
4) Types of food spoilage and their aetiology
5) Methods of limiting microbial proliferation in foods
6) Features of food fermentations as a desirable change
7) Evaluation of microbiological features of foods

### Practical

#### A Microbiology of milk
1) Sampling of milk for microbiological analysis
2) Application of rapid tests for evaluation of milk quality
3) Enumeration of bacterial numbers by direct and indirect methods
4) Methods used for determining psychrotropic organisms in milk
5) Assessment of pasteurized milk based on the following; standard plate count. E coil test. Phosphate test, thermoduric and thermophilic numbers
6) Evaluation of utensils and equipments for sanitation

#### B Microbiology of foods
1) Comparative study of raw and processed foods
2) Study of food enzymes in relation to their profiles at shelf life
3) Effect of storage temperature on shelf life foods
4) Microbiology of vegetables, eggs, meat, flour, bread, cereals and spices
5) Role of salt, sugar, inorganic acids and alkalies in food preservation
NutritionalMethods
Continuousimproving
Grading,
Technicalprocedure,
Cream
4.
Ghee
Introductionproperties
3.
Butter
4.

Butter: introduction to the butter-making process; theory of churning; batch and continuous methods. Technology of butter manufacture; over-run in butter; control offat losses in “utter milk; packaging and storage; transportation; defects in butter; rheology of butter; uses of butter.
Butter-making equipment: construction, operation, care and maintenance of cream separators, coolers and vacreator, factory butterchurn and continuous butter making machines.

Special butters and related products: manufacture, packaging, storage and properties of whey butter, flavoured butter, whipped butter, renovated butter/fractionated and poly-unsaturated milk, fat products, vegetable oil-blended products and low-fat spreads.
Manufacture, packaging, storage, and characteristics of Margarine of different types.

Ghee and butteroil: Methods of ghee making . batch and industrial processes, innovations in ghee production, procedure, packaging and preservation of ghee; utilization of substandard milk and old/stored butter in the manufacture of ghee.
Continuous process for the production of ghee.
Methods of manufacture, packaging, storage, distribution and uses of butter- oil.
Nutritional aspects of cream, butter, butter-milk, ghee and ghee residue.
Health aspects of milk fat.

INDIGENOUS MILK PRODUCTS
3. Ghee:
   a) Definition of ghee, importance of ghee in India
   b) Methods of manufacturing ghee
   c) Grading of Ghee and factors influencing quality of ghee
   d) Difference of ghee & butter oil
   e) Utilization of ghee and resedue.

4. Khoa
   3. Chhana
   4. Paneer
   5. Dahi
   6. Indigenous Cheese
   a) Preparation & Packaging, yield and composition.
   b) Factor affecting quality
   c) Packaging & Preservation
   d) Marketing and grading
   e) Legal standards

MILK BASED SWEETS
3. Place of milk based sweets in India and abroad.
4. Method of manufacture, packaging, storage and transportation of Rasogulla, Gulab jamun, Kalakhand, Rabri, Keer, Khurcha, malai, Rasmalai, Barfi, Peda, Srikhand, Sandesh, Chakka, Milk cake, Pantoa, Payodhi and lassi.

Practicals
1. Standardization, neutralization, pasteurization and cooling of cream
2. Preparation of sterilized cream.
3. Preparation of cooking butter by the hand-operated chum.
4. Preparation of desi butter.
5. Manufacture of table butter using the power-driven chum.
6. Preparation of a low-fat spread.
7. Preparation of ghee from cream and butter.
8. Plant visit.
9. Preparation of khoa
10. Preparation of Ghee from butter and cream.
11. Preparation of Paneer.
12. Preparation of chhana
13. Preparation of Dahi
14. Preparation of Surti Cheese
15. Preparation of milk based sweets

IDD-318 Dairy Farm Engg. 4

1. Farm machinery and power: Conventional country tools & implements type, principal parts & functions deshi plough, patella, hoe, sickles, Khurpi etc, yokes for desi bullocks, crossbred bullocks.
   Internal combustion engine and its principal parts and principles of operations: Agricultural Tractor and its principal parts maintenance and selection, driving the tractor, common troubles and remedies terminology.
3. Electrical machines: A.G. motors- principal parts, function types, difference between generator and motor, maintenance of motor.
4. Refrigeration: Importance in dairy industry, natural refrigeration, artificial refrigeration by mechanical compression system or absorption system, calculation of quantity of ice or dry ice required for certain amount of cooling, Mechanical refrigeration cycle, refrigerants, bulk milk coolers –construction function and maintenance, cold stores, operation and maintenance of cold stores.
5. Water supply :- Principles of water supply, water requirement, sources of water, pumps terminology, general construction of pumps, types-positive pumps, non-positive pumps, calculation of requirements of H.P., sanitary and irrigation pumps, maintenance of total head discharge.
6. Dairy machinery: milk cans- constructional features, metals used, types- conventional and insulated maintenance, handling cleaning, storage, Gerber’s centrifuge- principles, construction function and maintenance.
7. Storage tank: Types functions and constructional features, types and maintenance of clarifiers separators, homogenizers, heat exchangers, pasteurizers, milk sterilizers, can washers bottle washers ghee kettles, butter churns ice cream freezing equipments.
8. Farm building- principles of site selection, layout farm building, factors involved in assembling, lighting and ventilation requirements, importance of ventilation in dairy farm building factors involved in constructive features for temperatures and ventilation control, maintenance of building, feed go downs- constructional features, storage space and space requirement, damp and rodent proofing ventilation, anticroosive measures, disinfection, fumigation cleaning.

10. Feed grinding and mixing machines: Constructional features, maintenance and improvements in trailers and animal drawn vehicles, functions, types, milk van tanker-types, constructional features and maintenance.

12. Fencing: uses, types, constructional features, estimation, periodical checks and maintenance.

Practicals:
(a) Identification of principal parts and practice on starting stopping- petrol engine, diesel engine and tractor.
(b) Identification of principal parts and hitching to a tractor- mould board and disc ploughs and disc harrow.
(c) Chaff cutter- principal parts and their functions, operations of chaff cutter- milking machine- principal parts and their functions and operations.
(d) Phase induction motor with star delta and their functions, demonstration of operation, calculation of discharge.
(e) Demonstration of operation of dairy plant machinery. Study of the general features of feed grinder and mixture- principal parts and their function
(f) Acquaintance with carpentry tools- their functions and operations.
(g) Acquaintance with agricultural meteorological equipment, apparatus and their functions.
(h) Acquaintance with soldering, gas, and arc welding equipment their functions and operations.
(i) To Draw a plan of a – (i) Model of milking shed
(ii) Model of bull pen
(iii) Model of calf pen
(iv) Model of calving shed
THIRD SEMESTER

IDD – 325 Dairy Production – V (Animal Physiology and Reproduction) 4

General Introduction: Familiarity with the concept of Animal Physiology and reproduction and its significance in Livestock rearing.

Artificial Insemination: History merits, demerits and limitations, phases of A.I. viz, collection of semen, evaluation of semen, Dilution of semen, Storage of semen and deposition of semen for higher rate of conception.

Practicals
1. Identification of male and female reproductive organs.
2. Identification of different equipments used in animals Physiology and reproduction.
4. Preparation of artificial vagina and collection of semen.
5. Evaluation of semen- Macroscopic, Microscopic and chemical.
6. Preparation of semen- dilutors
7. Maintenance of records at A.I. sub centre.
8. Study of morphology of udder.

IDD – 326 Dairy Production – VI (Animal Disease & Hygiene) 4 Credit

General Introduction: Definition and concept of disease and health. Factors affecting the health of animal, signs of ill health. Care and feeding of sick animals.

Immunization: Types of immunity, Antigens and antibodies, vaccination.

Communicable Diseases: causes of communicable diseases, FMD, Rinderpes, cowpox, Tuberculosis John’s Disease, Haemorrhagic Septicaemia, Anthrex, Black Quarter and their etiology, incubation period, mode of infection, mortality, symptoms, treatment and prophylactic measures.

Common Parasites Disease: Causes, symptoms, treatment and preventive measures of common parasitic diseases.
Diseases of Digestive & reproductive organs: Causes, symptoms, treatment and preventive measures of common diseases of digestive and reproductive tract viz, Bloat, Impaction of rumen, diarrhea, dysentery, vaginitis, Trichomoniasis, vibriosis etc.

Practicals
1. Identification and use of common instruments and drugs.
2. Practice on casting and castration of animals

IDD – 327          Poultry Production          4 Credits

</thead>
<tbody>
<tr>
<td>1.</td>
<td>Poultry keeping in India: History, status of poultry in India, various improvement programmes</td>
<td>3</td>
</tr>
<tr>
<td>2.</td>
<td>Breeds: Breeds of Ducks, geese, Fowl, Quails</td>
<td>8</td>
</tr>
<tr>
<td>3.</td>
<td>Feeds and Feeding: Digestion &amp; Digestive system of fowl, composition, classification of poultry feeds, formulation of Balanced ration for various class of birds.</td>
<td>6</td>
</tr>
<tr>
<td>4.</td>
<td>Breeding: Reproductive systems of fowl, systems and methods breeding</td>
<td>4</td>
</tr>
<tr>
<td>5.</td>
<td>Health care &amp; Management: Hygiene and sanitation, common poultry diseases, prevent in India, vaccination programme for broilers and layers. Poultry housing &amp; equipment, Breeding, Management of layer, management of broiler.</td>
<td>20</td>
</tr>
<tr>
<td>7.</td>
<td>Economics of poultry farming: economics of Eggs production, Economics of Broiler production.</td>
<td>6</td>
</tr>
</tbody>
</table>

Practical
1. Body parts of fowl
2. Visceral organ of domestic fowl
3. Slaughtering of poultry
4. Defethering of Poultry
5. Evisceration, removing & cleaning of giblets
6. Calculation of dressing percentages
7. Candling and grading of eggs
8. Egg quality and their measurement
9. Preservation of eggs
10. Sising of chicks
11. Feeding, watering and space requirement for various class of poultry under different housing system.
12. Care of day old chicks
13. Management of broilers
14. Post mortem of birds
15. Computation of balance ration for various class of poultry.
1. Dairy Extension- meaning and purpose, extension education- meaning, history, objectives, philosophy and principles, basic elements of effective extension work.

2. Rural sociology- meaning and role in rural development, characteristics of rural life-physical structure of village society- social structure, concepts of culture, society, social change and their relevance to extension work.

3. Extension Education and Dairy Extension- role of extension education in development of Dairying. Training of extension personnel at different levels, extension teaching – methods and techniques and teaching aids, basic principles of learning and teaching, visit and training method.

4. Planning an extension programme- objectives, principles and steps, extension evaluation. Planning and execution of extension work in relation to development of animal husbandry and Dairying. Involvement of youth, women and other strategic units in development work.

Practicals
Observation and study of village extension work carried out at the key village (1.) Artificial Insemination (2) Fodder Development (3) Animal Management (4) Other rural extension activities (5) Visit and observation of village panchayats (6) Block Development Committee, (7) N.E.S. Block Development and District Planning meeting.

Practice in use of extension education methods- such as (8) Group discussion method and result demonstrations (9) Use of audio visual aid in extension teaching, use of puppetry, song, poetry and drama for extension work in the villages, Preparation of extension teaching materials such as (10) posters (11)
Charts, exhibits etc (12) Organization of vikas melas, vikas Sammelans (13) Cattle shows and rallies with emphasis on dairy and animal husbandry development, (14) Survey of a village for the purpose of planning extension programme for Dairy and Animal husbandry development

IDD – 329 PRINCIPLES OF ECONOMICS 3 Credit

5. Concept of Market, Meaning, Definition, Degree of competition in market, Demand and supply.
6. Concept of Distribution: Meaning, Definition, problem of distribution, Rent, Wages, Interest Profit etc.

IDD – 330 FINANCIAL ACCOUNTING IN DAIRY BUSINESS 3 Credits

1. Financial Management; its planning meaning, objective, functions, its role and importance
2. Concept of financial accounting; its subject matter, basic principles involve in accounting, classification and importance.
3. Concept of Accounting procedure; Journal, Definition; Role of debits
4. Concept of Double Entry System; meaning, advantages of Double Entry System
5. Ledger: Its concept, necessity, types ruling, difference between Journal and Ledger
6. Cash book; Meaning, types of cash, advantages, difference and similarities with ledger.
7. Trial balance; its meaning, definition, objective and characteristics of Trial balance, limitation etc.

Tutorial
1. Preparation of Journal
2. Preparation of Ledger
3. Preparation of cash book
4. Preparation of Trial balance
5. Preparation of Purchase Book
6. Preparation of Purchase return Book
7. Formate of sales return book
8. Formate of sales book
9. Formate preparation of Inventory
10. Preparation of Purchase register
11. Preparation of Sales register
12. Depreciation
2. Breeds and breeding of sheep:
   - Indian and exotic breeds of sheeps
   - Mating and A.I. in sheeps
3. Feeds and feeding of sheeps
   - Nutrient contents of daily diets, feeding of lamp and ewe at and after lambing
   - Common diseases of sheep and their control measures
4. Sheep products:
   - Sheep production statistics
   - Wool: Parameters of judging, wool quality, grading system of wool.
   - Economics of sheep farming

Practical
1. Body parts of sheep
2. Feeding, watering and space requirement for different class of sheep under various housing system
3. Marking of sheep
4. Shearing
5. Docking of lamp
6. Castration of lamp
7. Grading of wool
8. Economics of sheep farming
9. Cleaning and disinfection of houses

1. Importance of goat farming in India
2. Annual production statistics of goat and goat products
3. Breeds and breeding of goat:
   - Indian breeds of goats, Erotic breeds of goats
   - Breeds and breeding management of goats
4. Feeds and feeding of goats:
   - Nutrient requirement for goats
   - Feeding systems and feeding strategies for goats
   - Feeding management of goats
5. Management of goats:
   - Housing Management
Practical

1. Tathering, Determination age of goats, disbudding, castration, exercise, hoof trimming
   - Clean milk production
   - Care of doe after kidding

6. Health care for Goats:
   - control measures of common diseases
   - Health management

7. Economics of goat farming

Practical

1. Body parts of goat
2. Feeding, watering and space requirement for different classes of goats under various housing system
3. Determination of age of goats
4. Disbudding in Kids
5. Castration
6. Cleaning and disinfections of houres
7. Hoof trimming in goats
8. Economics of goat farming

IDD – 338  BREEDING & MANAGEMENT OF PIGS  3 Credits

1. Scope and importance of swine farming statics on swine
2. Breeds and breeding of pigs Important feeds of pigs experience in India
   - Guidelines for selection of sow and boar
   - Guidelines for normal reproduction in pigs and detection of heat in sows
3. Feeds and feeding of pigs: Nutritive requirement, creep feeding weaning
   Recommended rations for different class of pigs
4. Management practices for hogs Housing of hogs castration management at farrowing, Pig fenders, Pig wallows, management at breeding (flushing), Needle teeth Common disease of pigs and their control vaccination
5. Pork:
   - Steps of slaughter of hogs
   - Curing of pork
   - Economics of pig farming

Practical

1. Body parts of pig
2. Feeding watering and space requirement for different class of pigs under various housing system
3. Marking of pig
4. Removal of needle teeth in piglets
5. Feed mixing for pigs
6. Castration of pigs
7. Slaughtering of pigs
8. Economics of pig farming
9. Cleaning and disinfections of houses

IDD – 339  DAIRY BUSINESS MANAGEMENT  4 Credit

   Industrial Management: Principles of Farm Management, Law of substitution, Authority, responsibility.
   Organization: Types, methods of organization, line organization, Functional organization.
3. Management Functions: What is good management, function of Management, Leadership, Quality of a Leaders, Quality of a Supervisor, Attitude towards himself, Attitude towards others, Attitude towards his job.
   Delegation of authority: responsibility, authority, decision making.
   Reviewing management performance: Objectives
   Staff Welfare:
   Public relations: What is public relations, public relations and its three purposes, public relations and its application to Dairy Industry, Public relations with reference to consumers, Public relation with reference to local authorities and government.

IDD- 340  PRESERVATION & PROCESSING OF ANIMAL FOODS  4 Credits

1. Cooling, Pasteurisation and Preservation of milk
2. Indian meat industry
3. Structure, composition and nutritive value of meat tissues
4. Post mortal changes
5. Meat quality parameter
6. Meat cutting and packing
7. Principles of various preservation techniques:-
   Chilling, freezing, curing and smoking dehydration and freeze drying
8. Processing of meat and meat products- curing and smoking of Pork, grading, packaging & preservation of eggs as well as dressed chicken, chevon, mutton and pork.

10. Meat products:
   (i) Sausage
   (ii) Salami
   (iii) Kabab
   (iv) Tanduri chicken
   (v) Ham and bacon

Practical

1. Familiarity with various tools and equipments of meat processing
2. Slaughtering of Animals and Birds
   (a) Halal Method
   (b) Jharka Method
   (c) Jewish method
3. Dressing of Birds, packing and sale
4. Judging of meat of different animals
5. Grading, judging and preservation of eggs as well as carcass
6. Cut up parts of carcass - display
7. Curling of pork
8. Egg parts.

COMP- 401 COMPUTER APPLICATION 2 Credit

1. Introduction to Computers
2. H/W and S/W Concepts and Terminology
3. Operating System
   (c) DOS
   (d) Windows
4. Introduction to commonly used application software
   (c) MS Word
   (d) MS Excel
5. Computer Languages & Introduction to ‘C’ Programming Language
   (e) Input & Output statements
   (f) Declaration of variables
   (g) Operators
   (h) Control Statements (Branching and Looping)
6. Introduction to computer Networks
7. Introduction to Internet
8. Application of I.T.

Practical List:
1. Working with operating systems like MS. DOS, Windows
2. Study of Software packages, Like MS Word, MS Excel and MS. PowerPoint
3. Packages related to medical applications
4. How to search data, workable knowledge of Internet
5. Simple programs in C languages
   (i) To find the largest among three numbers
   (ii) To check whether the given number is palindrome or not.
   (iii) To find whether the given number is the prime
   (iv) To find sum and average of n integer using linear array
   (v) To generate the Fibonacci series
   (vi) To find factorial of a given number using functions.
